L. C. JAIN

Director General of Civil Aviation

# MINISTRY OF TRANSPORT AND COMMUNICATIONS Meteorological Department

## MEMORANDUM REGARDING THE PROBABLE AMOUNT OF MONSOON RAINFALL IN 1957

Previous weather conditions over certain parts of the world enable us to form an estimate, within somewhat wide limits, of the monsoon rainfall of India during the period June to September. These predictions aim to pass a statistical test of 80 per cent success, or, in other words, aim at being correct four times out of five on the average over a long series of years.

The data used are given in Section 2 below; these are followed by notes on the relevant inferences that may be drawn from them.

### 2. Data

**Java**—The monthly rainfall departures from October 1956 to February 1957 were +14 per cent, -3 per cent, 0 per cent, -12 per cent, and -12 per cent respectively.

**Equatorial pressure**—Pressure was in excess by 0.016" at Port Darwin in March to May, and by 0.005" at Seychelles in February and March; and was in defect by 0.002" at Djakarta from January to April.

**South Rhodesia**—Rainfall from October 1956 to April 1957 was in defect by 0.3".

**South America**—Pressure departures were as follows:—

	Buenos Aires	Cordoba	Santiago (Chile)
April 1957 .. ..	+2.3 mm.	+2.0 mm.	+0.1 mm.
May 1957 .. ..	-1.5 mm.	-2.0 mm.	-1.0 mm.

### Upper winds in m.p.s.—

**Bangalore, April, 6 Kms.**—The northerly component was -1.5.

**Calcutta, May**—The easterly component was -9.9 at 4 Km. and -6.4 at 2 Km.

**Agra-Madhosagar, March, 2 Kms.**—The easterly component was -3.6.

### 3. Inferences from the information

For the Peninsula (taken to consist of Bombay State, Madhya Pradesh (excluding Madhya Bharat, Bhopal and Vindhya Pradesh areas), Mysore North, Coastal Mysore (excluding South Kanara), Telengana and Coastal Andhra Pradesh) the available factors found to be of most importance are, in the order of decreasing reliability, Bangalore upper winds, Calcutta upper winds at 4 Km., South American pressure, South Rhodesia rain and Java rain. Of the factors, Bangalore upper winds are very unfavourable, South Rhodesia rain and South American pressure are indifferent, Java rain is slightly favourable and Calcutta upper winds are very favourable. The statistical analysis indicates that there is a four to one chance that the monsoon rainfall during June to September 1957 in the Peninsula will lie between 88 and 112 per cent of the normal.

For Northwest India (taken to consist of Jammu and Kashmir, the west Uttar Pradesh, the Punjab (I) (including Himachal Pradesh and Delhi) and Rajasthan) the factors used are, in the order of decreasing reliability, Agra-Madhosagar upper winds, Equatorial pressure, Calcutta upper winds at 2 Km., South Rhodesia rain and South American pressure. Of these, Equatorial pressure is moderately unfavourable, South Rhodesia rain and South American pressure are indifferent and the remaining two factors are very favourable. The statistical analysis indicates that there is a four to one chance that the monsoon rainfall in Northwest India during June to September 1957 will lie above 124 per cent of the normal.

#### 4. Summary of Forecast

The monsoon rainfall during June to September 1957 is likely to be normal in the Peninsula and above normal in Northwest India.

New Delhi, the 12th June 1957

#### NOTIFICATIONS

New Delhi, the 11th June 1957
